

Task 1 – File Automation

Objective :

To automate file handling using Python

Platform Used :

Google Colab

Python File :

Automation . ipynb

Description :

This Python program automates file handling operations such as creating folders, copying files, and managing data automatically

Steps Performed :

1. Opened Google Colab
2. Created Python notebook
3. Wrote Python automation code
4. Executed the notebook
5. Verified output successfully

Code Screenshot :

Task 1 – File Automation

```
import os
import shutil
import csv
from datetime import datetime

# -----
# LOG FUNCTION
# -----

def write_log(message):
    with open("log.txt", "a") as log_file:
        log_file.write(f"{datetime.now()} - {message}\n")

# -----
# CREATE DEMO FOLDER
# -----

folder_name = "automation_demo"

try:
    if not os.path.exists(folder_name):
        os.mkdir(folder_name)
        print("Folder created successfully")
        write_log("Folder created")
except Exception as e:
    print("Error creating folder:", e)
    write_log(f"Error creating folder: {e}")

# -----
# USER INPUT FILE
# -----
```

Files Included :

- Automation.ipynb
- Task1.pdf
- Screenshots
- README.md

Conclusion :

Task completed successfully and output verified.
