

Task 2 – API Integration

Internship Task

Python Developer Internship Task

Objective

The objective of this project is to fetch data from an online API using Python requests module, parse JSON data, and display the results properly.

Technologies Used

- Python
- Requests Module
- JSON
- Google Colab

API Used

<https://jsonplaceholder.typicode.com/posts>

Features

- Fetch API data
- Parse JSON response
- Display posts data
- Search/filter posts by ID
- User-friendly output

Working Process

1. Imported requests module
2. Connected to API URL
3. Fetched data using requests.get()
4. Converted JSON response into Python data
5. Displayed first 5 posts
6. Added search/filter feature using post ID

Output

Successfully fetched data!

Conclusion

This project successfully demonstrates API integration using Python requests module and JSON parsing with a search/filter feature.
